

*For small and medium size AV presentations, the number of sources on stage is usually limited to few presenters. The sound system is also simple including two main channels and one or two monitoring sources for the people on stage. In this case, the DSS-404 is an ideal and cost effective solution, with 4 x IN and 4 x OUT capabilities. If the front house mixer is equipped with a Dante module the CAT5e cable can be directly connected to the console or to an Ethernet switch for networking. This system is particularly compact and is perfect for mobile and rental applications.*
