

DLM-408

Live Event - Application Guide

This is a simple setting for a live event mobile application. The DLM-408 receive the 2 channels Main Out and the 4 channel Subgroups from the analog mixer. The Main channels are processed and dispatched in 4 channel outputs to drive the two-way active Line Array. The Subgroups channels are processed and routed directly to 4 outputs for the active stage monitors. The LAN connection to the PC is used for the Editor software
