

DLM-808

Theater - Application Guide

This is a typical equipment setting used for theater applications. The inputs of the DLM-808 features:

- 2 ch. for Stereo Main,
- 1 ch. for Mono Front-Fill
- 1 ch. for Under Balcony
- 2 ch. for Stereo Side-Fill.

Those 6 ch. inputs are processed to give 8 ch. outputs. The matrix function dispatches the two Main inputs to four Main outputs, the speaker system being two-way. A Dante connection can be implemented if both DLM-808 and the Front House Mixer are equipped with the option; this makes easy the cabling between the stage and the mixing place.

- Mic/Line Cable, Analog Audio
- Speaker Cable, Analog Audio
- ↔ Cat 5 Cable, LAN
- ↔ Cat 5 Cable, DANTE Digital Audio
