## Assembly - Application Guide

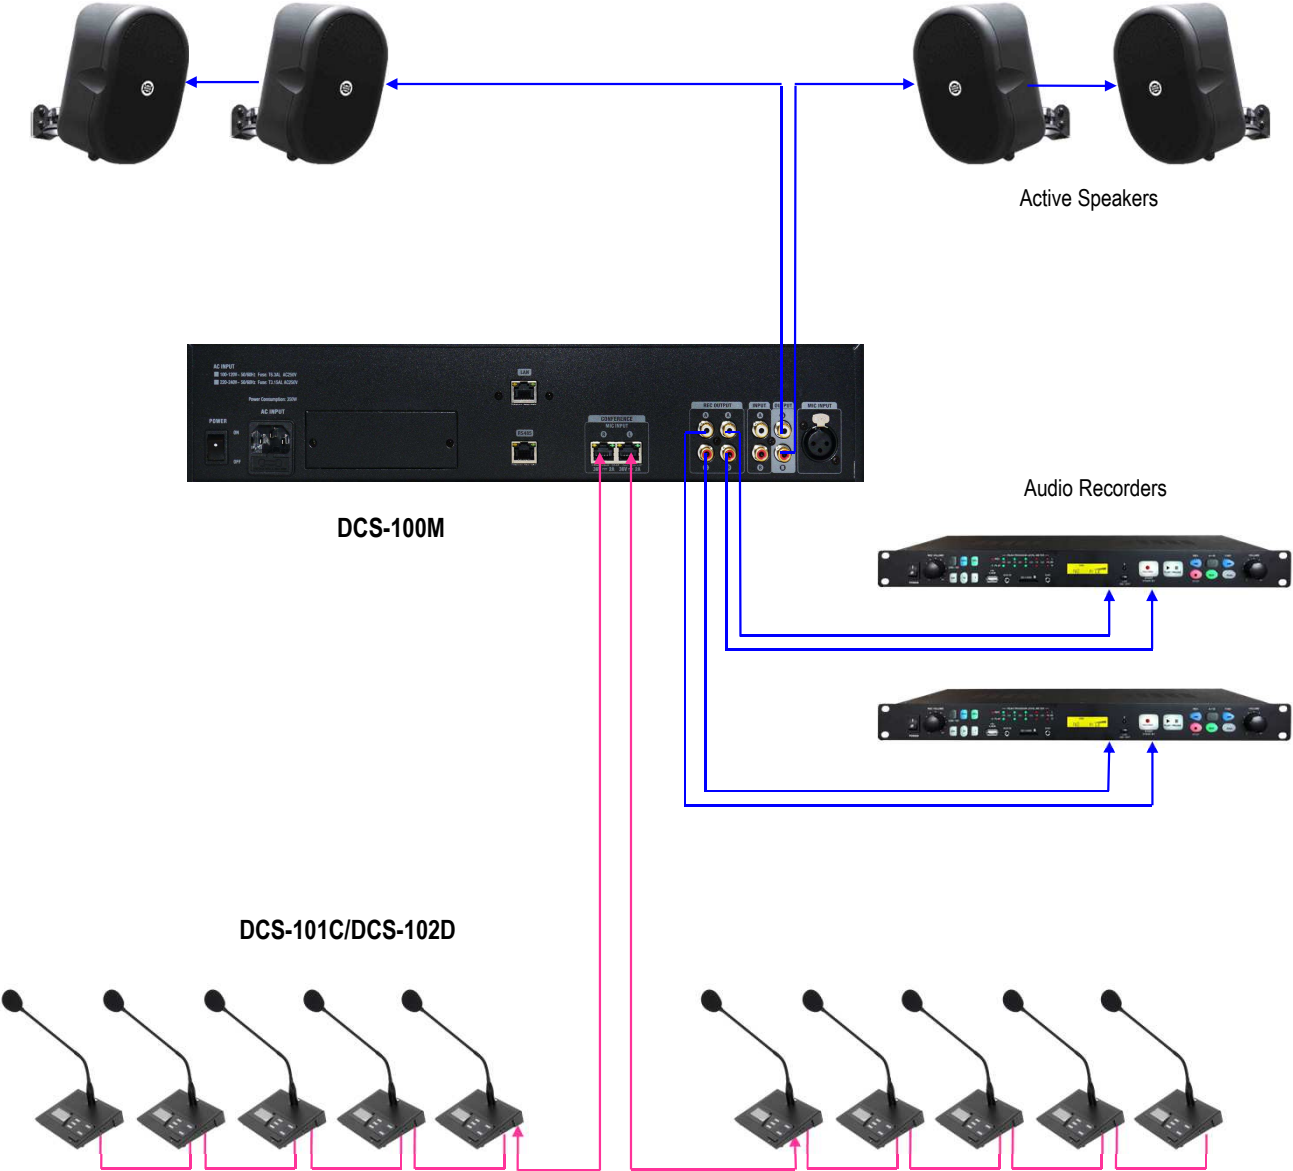

### Large Assembly

DCS-103B power boosters are used for additional units above 32 delegates. Camera tracking is necessary for speaker localization. Image is displayed on large screens for the audience. Dante card can broadcast the speeches to outside medias like radio or TV channels. MIC input is used for an Interpreter microphone. Delegate can use headphones and select the appropriate channel on their station to listen to the speech translation.

## Courtroom - Application Guide

### Flexible output management

Output signal can be addressed to 2 different connections. Especially recommended for court applications when two parties need to be recorded separately or an interpreter is required.

### Quick and modular setting

Presenter microphone and stereo signal from the video player are processed into the main frame and broadcast in the meeting room with a pair of active speakers. No special operator is needed to control the system. The Chairman can use the lap top computer or a tablet to manage the discussion by launching the vote session, changing the speaker name or starting the recording.
