

Adaptive and easy operating Voice Alarm System (VAS)

The VAS system benefits from SEIKAKU's know-how in the manufacture of PUBLIC ADDRESS products for more than 30 years, as well as from the company's investment of significant resources for the development of technologies using the Internet, such as SIP (VoIP) and POE.

From a schematic point of view, the system here seems complex, but in reality, it is simple. By connecting peripherals according to the size of the installation, VAS offers reliable solutions with exceptional sound quality while meeting the demand of the EN54-16 standard.
